

RECOMMENDATION LETTER

To Whom It May Concern,

It is my distinct pleasure to write this letter of recommendation for Luka Mamukashvili, who served as a contract Security Researcher and Penetration Tester for INI.GE Group from October 2025 to November 2025.

Luka was engaged to conduct a Black Box Vulnerability Assessment of our Student Portal. During this engagement, he demonstrated technical maturity and insight significantly beyond his years as a student.

Technical Achievements Luka's work was instrumental in securing our infrastructure. His most significant contribution was the identification and responsible reporting of a critical Insecure Direct Object Reference (IDOR) vulnerability within our central storage system. His discovery allowed our engineering team to patch a flaw that could have led to the unauthorized access of sensitive files and PII across our client network.

Furthermore, Luka identified several other high-severity issues, including:

- Broken Access Control vulnerabilities affecting internal user data.
- Stored XSS vectors in rich-text input fields.
- Hardcoded API secrets exposed in client-side JavaScript bundles.

Professionalism & Ethics What impressed us most was Luka's ethical approach to security testing. He adhered strictly to the scope of engagement and followed Responsible Disclosure protocols. His final technical report was detailed, well-structured, and provided actionable remediation strategies that allowed our developers to fix issues swiftly.

Luka possesses a sharp analytical mind and the ability to identify logic flaws that automated tools often miss. We are confident that he will be a valuable asset to any cybersecurity or engineering team he joins.

We strongly recommend Luka Mamukashvili for any position related to Cybersecurity, Penetration Testing, or Software Engineering.

Sincerely,

X

Sandro Giunashvili
Director at INI.GE Group Ltd.
